Wireframing tools/methods:

CaCoo: CaCoo is a wireframe tool that uses drag and drop UI. When creating wireframes on CaCoo, there are an unlimited amount of "undos". Considering that CaCoo is user friendly, various users can edit and work on the same wireframe.

Photoshop: I have used Photoshop before, but I never knew it could be used for wireframing. Photoshop is compatible for both Windows and Macs. It is best used for straight forward wireframing, quick sketches, and grouping.
